PROFILE

Junior Data Analyst who came to data from customer support. Talking with customers every day taught me to listen for the real problem behind a complaint, to explain things simply, and to stay careful with details under pressure. My data training gave me the tools to see the bigger picture: cleaning and exploring data, building dashboards and simple models, and turning the results into clear advice a team can act on. I work with a Brazilian *gambiarra* mindset: I find a practical way to make things work with the tools that are available.

SKILLS

Analysis: SQL, Python (pandas, NumPy, scikit-learn), BigQuery, Excel
BI & visualisation: Power BI (DAX), Looker Studio, Tableau, Matplotlib, Seaborn
Methods: Data cleaning & validation, EDA, RFM segmentation, K-Means, Random Forest, logistic regression
Workflow: Git & GitHub, Jupyter, dbt, Salesforce CRM, Excel VBA
Languages: Portuguese (native), English (fluent), Dutch (B1, actively improving)

DATA PROJECTS

Customer Support Performance & Churn Analysis | Python, scikit-learn | 2026 | **GitHub**
What makes customers unhappy, and can support tickets warn us before they leave?

- Generated a realistic synthetic helpdesk dataset (17,000+ tickets, 3,200 customers, two years) with a hidden outage and price increase, then cleaned it, explaining every missing value instead of filling it.
- Found that tickets that missed the SLA got a low CSAT score more than 5 times as often (28.9% vs 5.5%), and that Urgent tickets missed the SLA most (34.2%).
- Showed that after the price increase, Billing tickets almost doubled and 90-day churn rose from 8.6% to 13.9% while CSAT stayed stable, so CSAT alone would have hidden the risk.
- Built a logistic regression churn model (ROC-AUC 0.70) and turned the findings into recommendations for Support and Customer Success.

Customer Segmentation & Lifetime Value | Python, Power BI | 2025 | **GitHub**
Who are the most valuable customers, and what will they spend next?

- Segmented customers from 375K+ transactions with RFM and K-Means into VIP (0.15%), Core (72.87%) and At-Risk (26.98%) groups; VIPs average €21.3K in spend.
- Built a Random Forest CLV model (R^2 0.76) after finding and fixing data leakage, and a four-page Power BI dashboard with DAX measures.

Productivity & Menstrual Health Analysis | Python, Looker Studio | 2025 | **GitHub**
Does pain affect how much work someone can do, and can we predict it?

- Analysed 17,972 cycle logs from 2,000 users and found pain level is the strongest driver of lost work hours (3.4 hours a day on average in high-pain phases).
- Built a Random Forest model (75% accuracy) and a five-page Looker Studio dashboard for non-technical users.

EDUCATION

Le Wagon — Data Analytics Bootcamp (full-time) | Amsterdam, Netherlands | Oct–Dec 2025
SQL, BigQuery, Python, dbt, APIs, Power BI, Looker Studio, Git, statistics, machine learning basics

TripleTen — Data Analysis Bootcamp (part-time) | Online | 2024–2025

Anhembi Morumbi University — Bachelor's in Communication & Advertising | São Paulo, Brazil | 2010–2014

EXPERIENCE

Customer Service Specialist | Teleperformance | Utrecht, Netherlands | Sep 2022 – Feb 2024

- Handled 30+ customer cases a day by phone, email and chat in Salesforce CRM (Royal Canin UK account), with customer satisfaction above 95%.
- Spotted recurring issues in the case data and flagged them to the team; some of them led to process changes.
- Wrote case summaries and documentation that were later used to train new colleagues.

Housekeeping (part-time, alongside data studies) | Hotel De Reehorst | Ede, Netherlands | Mar 2024 – Oct 2025

Customer Service Representative | Atento Brasil (Disney+ launch) | São Paulo, Brazil | May 2020 – Dec 2020

- Handled 50+ interactions a day during a high-volume launch, tracking issue types so the team could see what went wrong.
- Wrote troubleshooting guides from scratch that became the team's main reference.

Customer Service Specialist, Fraud | Teleperformance | São Paulo, Brazil | Jan 2015 – Sep 2016

- Investigated 40–50 fraud cases a day, reviewing account and payment activity to find irregularities.
- Analysed fraud patterns and worked with the security team to strengthen protection measures.
